

ABSTRACT OF THE INVENTION

METHODS OF TREATING CONDITIONS ASSOCIATED WITH AN EDG-3 RECEPTOR

5

In one aspect, the present invention provides a method of inhibiting an Edg-3 receptor mediated biological activity in a cell. A cell expressing the Edg-3 receptor is contacted with an amount of an Edg-3 receptor inhibitor sufficient to inhibit the Edg-3 receptor mediated biological activity. Preferably, the inhibitor is not a phospholipid.

10

In a second aspect, the present invention provides a method where an Edg-3 receptor mediated biological activity is inhibited in a subject. A therapeutically effective amount of an inhibitor of the Edg-3 receptor is administered to the subject. Preferably, the inhibitor is not a phospholipid.
